Small Group Learning

The Computer Application Department implemented "Small Group Learning" method to the B.Com (CA) students as "Best practice Method".

Small Group Learning:-

It is an educational approach that focuses on individual learning in small groups & is distinguished from learning climate and organizational learning.

It allows students to develop problem-solving, interpersonal, presentational & communication skills, all beneficial to life outside the classroom.

It also develops social & leadership skills as learning how to draw out reluctant speakers, handle people who dominate the conversation & making sure that all members contribute.
